

ABSTRACT OF THE DISCLOSURE

An AIN service for provides a subscriber the ability to configure outbound call routing rules. Using telecommunications variables such as time of call, call busy status, call unanswered status, and numbers dialed, a subscriber is enabled to configure a service control point to perform an action such as forward a call, send a page with a message, use a dial-around number, or send a PIN. A web browser interface may be used by the subscriber to configure the SCP.
